Precautions

When using the S60 video camera, adhere to the following precautions:
1. Do not drop, knock, or shake the video camera.
2. Do not place the video camera near an object that generates strong magnetic fields, like a magnet or motor. Do not put the video camera close to an object that emits powerful radio waves, like an antenna. Strong magnetic fields may disrupt use of the video camera or damage image / voice data.
3. Do not expose the video camera to high temperatures or direct sunshine.
4. Do not put the memory card near an object that generates a strong magnetic field, like a television set, a speaker, or a magnet. Do not put the memory card in a place where static electricity occurs.
5. Disconnect the power supply to immediately stop battery recharge when overheating, smoking, or peculiar smells occur during recharging.
6. Keep the video camera out of reach of children during recharging, as the power cable may cause asphyxia or electrical shock.
7. Store the video camera in a cool, dry, and dust-free location.
Preface

Thank you for purchasing the AEE S60 series compact high-definition (HD) digital video camera, which features the following:

● Ultra-compact size and structure
● User-friendly interfaces
● Easy and intuitive operation
● Hands-free shooting that allows the user to capture real scenarios at any time and in any place
● Superior recording performance from its dynamic HD shooting technologies that provide the user with an exciting videographer experience.

This manual describes how to install and use the S60 video camera. It also provides information about the use, operation, installation precautions, and technical specifications of the S60 video camera. Before using the S60 video camera, read and understand this manual in full and keep it handy for future use. Designed to professional standards, the S60 video camera will meet the requirements of even the most discerning user.

Dispose of properly. Recycle it for a greener earth!

Warranty

This product has been certified for compliance with related safety regulations and specifications issued by the Federal Communications Commission (FCC) and Council of Europe (CE).

The S60 video camera is a compact, high-end HD digital camera intended for professional applications. It provides the following functions:

● Performs industry-leading HD digital shooting.
● Stores voice data.
● Displays images in real time.
● Performs video recording.
● Takes pictures.
● Displays time.
● Performs 4X digital zooming.
● Wi-Fi function and “App” application.
● Connects to an external special-purpose microphone.
● Performs USB 2.0 high-speed data transmission.
● Recharges the battery in USB mode.
● Accessories are available to facilitate your shooting experience at any time in any place. The S60 holds multiple patents for invention and technology.
Main Functions and Features

● Provides 140° wide-angle f/2.7 lens.
● Provides a special-purpose HD lens, which supports 1080P, 960P, and 720P HD video recording.
● Takes 16M pixelated pictures in 4608×3456 resolution.
● Wi-Fi function and more "App" application.
● Performs 4X digital zooming.
● Contains a new generation image sensor Exmor R COMS that doubles photosensitivity and sharpens image details even in a low-light environment.
● Performs shooting in multiple modes such as single shot, fast shot, and timed shooting.
● Provides a unique fast-shot feature that takes up to 8 photos per second.
● Provides an independent voice recording function for longer voice recording.
● Provides a 180° photo rollover function.
● Connects to an external TFT screen to view video recording and playback.
● Provides HDMI and AV output interfaces for easy connection to an HD monitor or TV set to view recorded files.

● Has a compact and stylish design.
● Provides better video effects in multiple video output modes (NTSC system):
  1080P(1920x1080) 60 frames / second
  1080P(1920x1080) 48 frames / second
  1080P(1920x1080) 30 frames / second
  1080P(1920x1080) 24 frames / second
  960P(1280×960) 60 frames / second
  960P(1280×960) 48 frames / second
  720P(1280×720) 120 frames / second
  720P(1280×720) 60 frames / second
● Records video programs in MP4 format to facilitate playback on a PC and uploads to video-sharing websites.
● Provides high color definition for clearer and more realistic video feed.
● Supports playback, file deletion, and other operations.
● Supports fast forwarding and rewinding.
● Built-in microphone adopts dual-Mic design to achieve a high quality stereo recording effect.
● All-around highlight status indicator.
● Built-in G-Sensor that functions as an automobile black box.
● Supports connection to an external microphone (special-purpose microphone only).
● Provides a 1/4-inch general-purpose interface for accessory use.
● Accessories create a strengthened structure with improved reliability and stability.
● A rechargeable, built-in, high capacity lithium-ion battery extends video recording time.
● Provides shock-proof features to withstand minor bumps or falls.
● Provides IP68 waterproof housing to withstand a diving depth of 100 meters.
● Provides automatic standby to save power and can be set to auto-save voice and video data.

When powering down the screen, the TFT display indicators will be lit. You can long-press the Shutter button to turn on/off the screen.
## Preparations Before Use

### Charging

To check battery power, turn the unit on. If the battery level is low, charge it.

Use the supplied power adapter or a USB port to charge the S60:

When the S60 is charged in a power-off state, the red indicator will flash slowly. After the battery is fully charged, the red indicator will stay on.

**Preparations Before Use**

**Charging**

To check battery power, turn the unit on. If the battery level is low, charge it.

Use the supplied power adapter or a USB port to charge the S60:

When the S60 is charged in a power-off state, the red indicator will flash slowly. After the battery is fully charged, the red indicator will stay on.
Installing the Battery

1. Before Installing the battery, ensure that the battery "lock key" at the bottom of the S60 is unlocked.

2. Push the battery into the battery slot completely as below:

3. Battery lock:

Install TFT Display

The S60 supports an external, dedicated 2” TFT display which performs CX setup, playback, file deletion, etc. on the camera to preview or play the video back.

Install the display as shown below:
Insert and Remove The Memory Card

The S60 supports an external TF card up to 64G. Though all SD cards above Class 10 can be used on the S60, a high-speed card is recommended for high-definition shooting. When shooting during dynamic motion, brand SDHC cards are recommended for use.

Insert the memory card
1. Ensure that the S60 is switched off.
2. Insert the SD card flatly into the memory card slot, following the direction of the arrow. A "click" can be heard to indicate the card has been fully inserted.

• Remove the memory card
Press down on the center of the exposed part of the SD card and the card will pop up slightly. Slide the card out flatly.

Before connecting the host to Wi-Fi or the remote control, please first insert the SD card.

Startup

Turn the power key to "ON" to turn on the S60:

When the host is in a power-on state, you can long-press the Shutter button and Stop button simultaneously for 5s to turn off the host. After closing the host, you can long-press the Shutter button and Stop button simultaneously for 5s to turn it on.

• Two red indicators will be lit.
• The S60 enters recording standby mode. Now TFT display is shown as below:
Language

1. Press the "M" button to enter the camera setting menu.
2. Press the "-" / "+" button to select "-Language";
3. Press the "<" / ">" button to select "-Language" and press the "OK" button to confirm.
4. Press the "<" / ">" button to move the cursor to the language type to be modified. Then press "OK" to confirm.
5. Press the "M" button to exit the menu and return to recording standby mode.

Date/Time

1. Press the "M" button to enter the camera setting menu.
2. Press "-" / "+" to select "-Date/Time".
3. Press "<" / ">" to select "-Date/Time" and press "OK" to confirm.
4. Press "<" / ">" to move the cursor to the style to be modified. Then press "OK" to confirm.
5. Press "<" / ">" to move the cursor to the time or date to be modified. Then press "-" or "+" to modify the time and date. Press "OK" to confirm.
6. Press the "M" button to exit the menu and return to recording standby mode.

Use "<" / ">" to select the item to the left / right, and use "+" / "-" to select the item above/below the selected item. After selection, press "OK" to confirm the operation.

Please ensure that the date and time are correctly set. This unit will add time to the photo/video based on this setting.

Select Light Metering Mode

To achieve the best exposure effect, use the central spot light metering mode when the central spot is bright and the surrounding environment is dark.

light meter mode key

- "-LightMetering" : turn on central spot metering
- "LightMetering" : turn off central spot metering
Start Video Recording Via G-SENSOR Mode

Turn the G-Sensor key to "ON" so that the S60 will actively sense the change of gravity. The system will automatically start video recording in case of shock or tilting, etc. When this mode is applied in fixed installation, mounted on a vehicle or helmet for example, it can start video recording automatically without the need to start recording in advance. Using this option frees you from manual operation while conserving battery power.

If the camera does not sense a change in gravity after 3 minutes, it will exit video recording.

⚠️ During the camera’s startup process, do not activate the G-sensor function simultaneously to prevent error.

Video Modes

Basic Operations of Video Recording

1. Turn on the S60 to enter recording standby mode.
2. Aim the lens on the subject and preview it in TFT display.
3. Press the "Video recording" button once to start video recording.
   - The system will tick once to indicate the start of video recording.
   - The TFT display shown below is for video recording:

   ![TFT display for video recording](image)

   - Working mode (photo shooting)
   - Remaining number of shots of memory card
   - Resolution for photo shooting
   - Battery level

4. During video recording, press the "Stop" button once to stop video recording.
   - The system generates a tick tone twice to indicate that video recording stops. The time counter also stops.
   - The display will return to recording standby mode.
Parameter Setting For Video Recording

Perform the following steps to set the parameters for video recording:

1. Press the "M" button to enter the setting menu.
2. Press "+" / "-" to select "."
3. Press "<" / ">" to move the cursor to the sub-menu you want to configure. Press "OK" to enter the sub-menu:

<table>
<thead>
<tr>

<td>Video resolution</td>
</tr>
<tr>
<td>![Icon]</td>
<td>Bitrate</td>
</tr>
<tr>
<td>![Icon]</td>
<td>180° photo rollover</td>
</tr>
</tbody>
</table>

4. Press "<" / ">" to select the parameters you want.
5. Press "OK" to confirm.
6. Press the "M" button again to exit the setting menu.

- **Execution Mode**
  Select the execution mode you want. Press "OK" to confirm. Press "M" again to exit the setting menu.

  - ![Icon] : Video recording
  - ![Icon] : Voice recording
  - ![Icon] : Time Lapse
  - ![Icon] : PIV
  - ![Icon] : Video-only
  - ![Icon] : Time Lapse
  - ![Icon] : Auto video

- **Video-Only Mode**
  In this mode, you can record a video without voice.

- **Time Lapse Mode**
  The time Lapse function records one picture as a frame of the video according to the time interval you set. It doesn’t require post-editing and can easily capture continuous frame evolution and movement.

  The available options are: 1s, 2s, 5s, 10s and 30s.
  (The function is unavailable in 720P 100f/120f modes.)

- **Auto Video Mode**
  If this function is enabled, the system auto-starts recording video according to the countdown time you set.

  The available options are: 5s, 10s and 20s.
• **PIV(Photo in video)**
  
  In this mode, you can shoot photos in the video recording process. (The function is unavailable in 720P 100f/120f modes.)
  
  Manual photo shooting ( ): Press "Shutter" button during video recording to take one photo.
  
  Auto photo shooting: During video recording, the system continuously performs photo shooting at the set time interval. There are four options of time interval: 5s, 10s, 30s and 60s.

• **Video Resolution**
  
  The optional resolutions for video recording are listed as below:

<table>
<thead>
<tr>
<th>Resolutions</th>
<th>PAL System</th>
<th>NTSC System</th>
</tr>
</thead>
<tbody>
<tr>
<td>1080P(16:9)</td>
<td>24fps, 25fps, 48fps, 50fps</td>
<td>24fps, 30fps, 48fps, 60fps</td>
</tr>
<tr>
<td>1920x1080</td>
<td></td>
<td></td>
</tr>
<tr>
<td>960P(4:3)</td>
<td>48fps, 50fps</td>
<td>48fps, 60fps</td>
</tr>
<tr>
<td>1280x960</td>
<td></td>
<td></td>
</tr>
<tr>
<td>720P(16:9)</td>
<td>50fps, 100fps</td>
<td>60fps, 120fps</td>
</tr>
<tr>
<td>1280x720</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

• **View Angle**
  
  Optional view angle: Broad, Medium, Narrow, Small. (The function is unavailable in 960P and 720P modes.)

• **Bitrate**
  
  This unit provides two bit rate options: high "" and normal "". (If high bit rate is selected, you will get clearer picture with increased file size).
• Video Content Loop
  You can activate or deactivate the loop recording function. If ON, your video file will be stored automatically in 10 minute segments. If OFF, your video file will be stored in 15 minute segments.

• 180° Photo Rollover
  When this function is activated, an upright video file can be obtained when using the S60 to shoot video upside down. (The function is unavailable in 720P 100f/120f modes.)

• Display Time
  You can choose to display or not display the video recording time at the bottom right corner of the photo. (The function is unavailable in 720P 100f/120f modes.)

---

Audio Record

Operating procedures for audio recording:
1. Enter the audio recording mode and press "Video Recording" to start audio recording.
   • The system will tick once to indicate audio recording.

2. During audio recording, press the "Stop" button once to stop audio recording.
   • The system generates a tick tone twice to indicate that video recording has stopped.
   • The display will return to recording standby mode.

Exit audio record mode:
1. Press "M" button to enter the camera setting menu;
2. Press "<" / ">" to select " " and press "OK" to confirm;
3. Press "<" / ">" to select " " mode and press "OK" to confirm. The S60 will return to recording standby mode.
Photo Modes

Operating Procedure for Photo Shooting

1. Turn on the S60 to enter recording standby mode.
2. Aim at the subject and preview it on the display.
3. Press the "Shutter" button once to switch the working mode to "photo modes."
4. Press the "Shutter" button again to shoot one photo.
   • The system will click to indicate a completed operation and then returns to photo shooting standby mode.
   • The TFT display in photo shooting mode is shown below:

Parameter Settings for Photo Shooting

Perform the following steps to set the parameters for photography:

1. Press the "M" button to enter the setting menu.
2. Press "+" / "-" to select "icon":";
3. Press "<" / ">" to move the blue cursor to the sub-menu you want to configure. Press "OK" to enter the sub-menu:

</tr>
</tbody>
</table>
```

4. Press "<" / ">" to select the parameters you require.
5. Press "OK" to confirm.
6. Press the "M" button again to exit the setting menu.

• **Capture Mode**
  Select the capture mode you require and press "OK" to confirm.
  Press the "M" button again to exit the setting menu.

- : Single shot mode
- : Fast shot mode
- : Continuous Shooting Mode
- : Timed shooting mode
• **Single Shot Mode**  
  Take one photo when the photo shooting button is pressed.

• **Fast Shot Mode**  
  The S60 takes several photos within one second.  
  The available options are: 3/1s, 6/1s, 8/1s (photos per second).

• **Continuous Shooting Mode**  
  In this mode, you can shoot photos continuously as per the preset time interval until you press the "Stop" button.  
  The available options are: 0.5s, 1s, 2s, 3s, 5s, 10s, and 20s.

• **Timed Shooting Mode**  
  When the "Shutter" button is pressed once under the recording standby mode, the S60 will start a countdown and take photos when the set time has elapsed.  
  The available options are 3s, 5s, 10s.

• **Photo Resolution**  
  Three optional resolutions include: "8M", "12M" or "16M".

• **Display Time**  
  You can choose to display or not display the time at the bottom right corner of the photo.

### Settings

1. Press "M" button to enter the camera setting menu.  
2. Press "-" / "+" to select "

3. Press "<" / ">" to move the blue cursor to the sub-menu you want to configure. Press "OK" to confirm.

<table>

• **Warning Tone**  
  Adjust the sound level of the buzzer. Three modes are available: Off, Medium(50%) and Standard(100%).

• **Status Indicator**  
  Activate or deactivate the status indicators.  
  Three modes are available: Off (All OFF), Two (Only front cover and top cover) and On (All ON).
• **On Screen Display**  
  Display or hide the recording icons or information on the display screen.

• **Auto To Standby**  
The S60 is set to automatically enter standby mode if no operation (photo shooting, video recording or button operation) is carried out over a certain length of time. If an operation is completed in the timing process, the timer will be reset. Under standby mode, press the video recording button/shutter button/stop button to awaken the S60. The available modes options are: Off, 2 minutes, 5 minutes and 10 minutes.

• **TV Output Format**  
  This setting is designed to ensure that the frame rate of video recording matches the playback format on TV. Please select NTSC in North America. Please select PAL outside North America.

• **Format**  
  This option clears all the files in memory.

• **Recover Factory Setting**  
  This option allows all system settings to be restored to their original factory settings.

**Delete Files**
1. Under file playback or thumbnail preview mode, move the cursor to the file icon you want to delete.
2. Press the "M" button to enter file operation mode and move the cursor to "Delete file."
3. Press "OK" to confirm.
4. Move the cursor to "delete single"/"delete all" and press "OK" to delete the file(s).
   - : Delete single
   - : Delete all

**File Protection and Unlocking**
1. Under file playback or thumbnail preview mode, move the cursor to the file icon you want to protect.
2. Press the "M" button to enter file operation mode and move the cursor to "file protection."
3. Press "OK" to confirm.
4. Select protection type and press "OK" to confirm:
   - : Protect single
   - : Protect all
   - : Unlock single
   - : Unlock all

Protected files cannot be deleted. However, these files can be deleted by formatting.

Upload Audio/Video/Photo Files to PC
1. Use a USB data cable to connect the camera to a PC.
2. Switch on the S60.
3. Click the "My Computer" icon on the desktop and find the "Removable Disc" icon. If the camera is not detected, close the "My Computer" window and reopen it after waiting several moments. "Removable Disk" should now be displayed.
4. Double click the "Removable Disc" icon.
5. Copy/move the file to the PC’s hard drive.

View Video/Photo On HDTV
The recorded file can also be played on TV or displayed with an HDMI interface.
Ensure that your camera is properly configured to the NTSC (North America) or PAL (Non-North America) video format. Video and images on the S60 cannot be properly displayed on-screen if the camera has not been configured.
Use an HDMI cable to connect the S60 to the TV set:

This function is not available when opening Wi-Fi.
With an integrated Wi-Fi module, the S60 can connect to a Wi-Fi remote control, smartphone, or tablet PC to achieve remote control function. First, please install the appropriate APP software provided by Hitec/AEE on your device.

**Download a Wi-Fi APP**
The Wi-Fi APP is available for free download in the iPhone App store and Google Play Store.

1. **Android users:** In the Google Play Store, search "AEE APP" (quotation marks needed). Once found, download, install, and connect it to Wi-Fi according to the user manual.
2. **iPhone users:** In the iPhone App store, search AEE. Once found, download, install, and connect it to Wi-Fi according to the user manual.

**Wi-Fi Starting and Connection**

1. Push the Wi-Fi key to "ON" to switch on the Wi-Fi function:

   ![Wi-Fi key](image)

   The blue indicator will begin flashing and the Wi-Fi signal icon "[ ]" can be seen on the upper left corner of the TFT display.

   **Do not key in any operations while waiting for the Wi-Fi function to connect or disconnect.**

2. Turn on your camera and wait until the blue Wi-Fi indicator flashes slowly. Search for a Wi-Fi hot spot on a mobile receiving device, select the "AEE Magicam" network and connect it (default password: AEE12345). The camera and the mobile device are now connected.

3. Click the App icon "[ ]" on the mobile device to display the icon ( ) shown in Fig. 1. Enter the interface shown in Fig. 2 to remotely view your camera’s screen and set up parameters.
In case of Wi-Fi connection failure, the icon " " will appear. Select "Yes" to try connecting again. If you select "No", click the icon " " to enter the WLAN settings interface or click the icon " " to enter the main interface to view local files only (Android version).

You can control your camera remotely by clicking the icons on the main interface.

2H30: Display the remaining recording time in video recording mode.
Display the remaining number of shots in photo shooting mode.

The mobile device must be used within a distance of max. 100 meters from the S60 in an obstacle-free and horizontal angle.

The real-time preview is unavailable for video recording 720P 100f/120f modes.
Operating Instructions for Wi-Fi Control Interface

1. Video Recording
Click the Video recording mode icon " ". The current state icon will dispaly as " ". Click it to start / stop video recording.
Click the icon " " to maximize the preview (See Fig. 3).

2. Single shot
Click the Single shot mode icon " ", it will turn blue " ". The current state icon will dispaly as " ", click it to take one picture.
Click the icon " " to maximize the preview (See Fig. 4).

You can set up your desired video resolution in the parameter setting interface.

You can set pixilation in the parameter setting interface.
3. Fast Shot
Click the Fast shot mode icon "аци", it will turn blue "аци". The current state icon will display as "аци", click it to take pictures within one second.
Click the icon "аци" to maximize the preview (See Fig. 5).

You can set how fast the camera takes pictures in the camera setting interface.

4. Playback
Click the icon "аци" to enter the interface shown in Fig. 6 and view videos and photos remotely.

1. Camera storage
2. Mobile device storage

Slide the icon "аци". If you select "Camera Storage", you can replay the files stored on the camera. If you select "Mobile Device Storage", you can replay the files downloaded from the camera to the mobile device. Click the icon "аци" to enter the App settings interface. Click the icon "аци" to return to the WiFi control interface. Click the icon "аци" to enter File selecting. Click the icon "аци" to download media files from the camera to your mobile device.
Click on the thumbnail to view it in large preview. You could slide it left or right to select the desired file.

Photo Preview

Video Preview

Click the icon " " to return to the thumbnail preview interface.
Click the icon " " to download the current file to your mobile device.
Click the icon " " to delete the current file.
Click the icon " " to display video.

Download Files to Mobile Device

Return to the thumbnail preview interface and click the icon " " to enter the Download interface. Click the desired files to download to your mobile device.

Files downloaded
Files in waiting
Files in downloading

Download all the files from your remote camera to the mobile device.
Cancel all downloads

In the thumbnail preview mode, slide the icon " " to view local files. Click the icon " " to enter the interface shown in the figure below and then click the desired files to share them on social networking websites.
Click on the thumbnail to view it in large preview. You could slide left and right to select the desired file.

Photo Preview

Video Preview

Click the icon " " to view the current file information.
Click the icon " " to enter the video trimming interface.
( " iOS version)
Click the icon " " to share the current file on a social networking website.

Trim Videos

When viewing the downloaded files on the mobile device, you can click the icon " " at the bottom of the screen to enter the video trimming interface shown in the figure below:

Save and share the edited video file

Current frame
Start frame
Play icon
Storyboard
End frame
Expand the frame
Narrow the frame

This function allows you to extract a clip from the video to generate another video by changing the starting frame and ending frame. Select one of the two methods described below to change the starting frame and ending frame:
Method 1: Change the starting frame and ending frame by directly dragging the time frame panel to the desired frame. (Click the Play key for previewing until the best location is selected).
Method 2: Click " " to set the current frame as the starting frame. Drag the time frame panel to change the current frame, and then click " " again to set the current frame as the ending frame.

Change Wi-Fi Connection Name and Password

1. To change the Wi-Fi connection name:
   Connect your camera (with TF card installed) to the computer and turn on your camera. On the computer, double click "My Computer" to find and access the removable disk and then open the "WiFi.conf" file in the folder "MISC." Locate "AP_SSID=AEE Magicam." Change the content following the equal sign "=" to your desired name and save it.

2. To change the Wi-Fi connection password:
   Connect your camera (with TF card installed) to the computer and turn on your camera. On the computer, double click the icon "My Computer" to find and access the removable disk. Then open the "WiFi.conf" file in the folder "MISC". Find "AP_ PASSWD=AEE12345". Change the content following the equal sign "=" to your desired password (containing at least 8 digits and above) and save it.

⚠️ When the camera and the Wi-Fi based remote control are synched in operation, hosts will give priority to the operation command from the camera.
⚠️ Above images for reference only.

<td>After entering the mode selection state, press to select the option above.</td>
</tr>
</tbody>
</table>

- Under the video recording mode, press once to switch the current mode to the photography mode.
- Under photography mode, press once to take a photo.
- Long-press for about 2s to enter the mode selection state.
- Select your desired mode and press to enter.
- During video recording, press to stop video recording.
- After entering the mode selection state, press to select the option below.
- Press once to switch the viewing angle of the camera to wide angle.
- Press once to switch the viewing angle of the camera to medium angle.
- Press once to switch the viewing angle of the camera to narrow angle.
- Press once to switch the viewing angle of the camera to small angle.

**Tips:**

- Viewing angle switch buttons in the remote control can only be used in 1080p mode.
- When the DRC10 accidentally crashes in use and does not follow normal shut-down, press the "Wide view" and "Small view" keys to force shutdown.
Startup

Long-hold the "Power / Record" button for 5s to start the Wi-Fi based remote control. After startup, the screen will display the battery icon "ображение". If the battery icon is empty, it indicates that the battery level is low and charging is needed; please connect the USB power supply to the USB port of the remote control for charging.

Pairing

Please complete the pairing process before enabling the remote control functions. Steps for pairing between the Wi-Fi based remote control and the camera are as follows:

1. Turn on the camera and activate the Wi-Fi function.
2. First, press and hold the "Stop" button on the Wi-Fi remote control. Next, long-press "Power / Record" for 5s to start the remote control. The red power indicator will stay on and the screen will display the battery icon "ображение".
3. Long-press the "Power/Record" and "Stop" buttons and do not release them until the WAIT HOST PBC” icon appears.
4. Press the "Stop" button on the camera once and the Wi-Fi remote control screen will display the icon below:

5. Press the "Stop" button on the Wi-Fi remote control and the remote’s screen will display the icon below:

6. When the remote control enters the recording standby state and the following interface, code pairing is successfully completed:

Precautions

1. This remote control is a sophisticated product; do not drop or otherwise structurally impact this product.
2. The remote control should not be kept in proximity to objects with high-intensity magnetic fields such as magnet and electric motors, or to objects that send out strong radio waves such as antenna. Strong magnetic fields may result in failure of the remote control.
3. Do not put the remote control in a place subject to high temperature or direct sunshine.
4. Store the remote control in a cool, dry and dustless place.
5. This product is not designed for auto standby. If it sits idle for a long time after startup, please turn off power to the remote control.
6. The remote control is only able to connect to one host at a time. It cannot connect to multiple hosts simultaneously.
7. If the remote control disconnects abnormally and no longer functions as normal, simply reboot the device to put it back to use.
8. Do not operate the remote control while it's being charged.
9. If you activate the video recording function in the host with a remote control, simply press “Stop” on the remote to stop recording. Do not press the “Stop” button on the host to stop recording.
Accessory Application

The S60 is suitable for handhold use or hand-free use in most locations with the help of appropriate accessories. When the S60 is fitted with water-proof housing, it can be used to record videos underwater.

Water-proof Housing and Moisture-proof Foam

S60 water-proof housing up to IP68 can protect the camera 100 meters underwater. In order to avoid and reduce the dewing on the glass of the water-proof house, we suggest inputting the moistureproof cotton inside the water-proof case in big temperature range environment.

Follow these steps to load S60 into water-proof housing:

1. Moisture-proof foam
2. Waterproof Cover
3. Waterproof Cover
4. Waterproof Cover

Follow these steps to assemble the waterproof housing rear case:

You can choose different waterproof covers in accordance with your needs:

<table>
<thead>
<tr>
<th>Standard Waterproof Cover</th>
<th>Waterproof Cover with Hole</th>
<th>Waterproof Cover with Microphone</th>
</tr>
</thead>
<tbody>
<tr>
<td>High waterproof protection standard. Used for diving, swimming, surfing, etc.</td>
<td>Rainproof function with excellent audio recording effect.</td>
<td>Rainproof function with external microphone and excellent audio recording effect (Please remember to unplug the cover of memory card on the side of the host before using this waterproof cover).</td>
</tr>
</tbody>
</table>
The plug bracket affixes the S60’s water-proof housing firmly onto the sticky seat:
Use Curved Adhesive and Flat Adhesive

The S60 comes with curved adhesive and flat adhesive for installation on different surfaces. You can easily attach the camera onto a helmet, vehicle, or the surface of other devices.

Precautions for the use of 3M double-sided foam tape:
1. Before using 3M double-sided foam tape, select an appropriate curved or flat surface where the tape can adhere smoothly to the surface.
2. Before using 3M foam tape, clean the surface to be adhered to.
3. Before applying 3M foam tape, we suggest you heat its surface properly (a hairdryer may be used), especially when the temperature is below -20°C.

⚠️ As our products undergo continuous development, the specifications are subject to change without notice.

### Power Supply

The S60 video camera uses a power unit certified by the following authorities.

- UL mark U.S. Power Certification
- C-TICK mark Australia Power Certification
- CE mark E.U. Power Certification
- GS mark Germany Power Certification
- CCC mark China Power Certification
- PSE mark Japan Power Certification
- BS mark U.K. Power Certification

⚠️ The surface temperature of a power unit in use may rise. This is normal.
Precautions for The Waterproof Housing

Waterproof housing is a precision component. When using waterproof housing, adhere to the following precautions:
1. Do not randomly remove or change the O-ring, key, or lens cover. Otherwise, the waterproof performance deteriorates.
2. Do not store the waterproof housing in a place with corrosive gases due to strong acid or alkali. Do not put the waterproof housing in contact with chemical or corrosive objects, such as strong acid or alkali.
3. Do not put the waterproof housing in a place where temperatures are high (50°C) or low (-10°C) to avoid deformation.
4. Do not expose the S60 video camera to sunshine to avoid deterioration of its waterproof performance.
5. Before use, ensure that the O-ring is intact, the seal is clean, the housing is fully sealed, and the buckle is tight.
6. After using the housing in salt water, wash it clean using fresh water, dry it, and store it in a temperate place.

Tips

1. When the unit is in use for a long period of time, its surface temperature will rise.
2. If you do not plan on using the unit for a long period of time, it is suggested that you charge it once every 6 months to maintain optimal battery performance.
3. Use of the digital zoom function during shooting will have a slight impact on image quality.
4. Visual angles under different modes will be differ slightly.
5. To play a high-definition video file, it is suggested you use a PC or other professional device.
6. If you enable the cyclic recording function over a long period or frequently shoot/delete photos, the memory card may retain data fragments that prevent photo storage or picture taking. Please back-up the data to an external storage medium and perform the formatting operation on the memory card.
7. When the camera is being used in a high-temperature environment, the lattice screen may become black. This is a normal phenomenon and will not affect functioning.
8. When the camera is in use over a long time, the temperature of the metal parts near the lens may rise. This is a normal phenomenon, but please do not touch the heated metal parts.

9. Hot plugging is not supported. If the screen goes white, please restart the camera to return to normal.

10. The main unit can be operated normally during charging, but this may reduce the service life of both the battery and the device.

FCC Notices

1. The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

2. This device complies with Part 15 of the FCC Rules. (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
