Congratulations on purchasing your new X2 AC Plus Black Edition Charger! This latest addition to our innovative charger line offers expanded capacity and compatibility in a portable and compact package. With dual inputs affording flexible battery charging at home and in the field, the X2 AC Plus Black Edition also boasts Hitec’s innovative power distribution mode which allows you to efficiently assign output power based on individual battery requirements. Capable of charging all battery chemistries (including the new generation LiHV), this powerhouse has a built-in 10-amp power supply, internal balancing circuits and 10 different charge/discharge profiles. Additional features include our “SCAN TO GO” and Smartphone control via Bluetooth.

As with all Hitec products, please read the OPERATING INSTRUCTIONS, WARNING and SAFETY NOTES in their entirety before you attempt to use your new product.

**THE CHARGING AND DISCHARGING OF RC HOBBY BATTERIES CAN BE DANGEROUS. FAILURE TO FOLLOW THESE EXPLICIT WARNINGS CAN RESULT IN PROPERTY DAMAGE AND/OR LOSS OF LIFE.**

⚠️ NEVER LEAVE YOUR CHARGER UNATTENDED WHILE IN OPERATION.

⚠️ NEVER CHARGE ON OR AROUND COMBUSTIBLE MATERIALS.

⚠️ NEVER CHARGE A DAMAGED BATTERY PACK.

⚠️ LOW COST, NO-NAME BATTERY PACKS POSE THE MOST DANGER. WE RECOMMEND YOU ONLY USE BATTERY PACKS THAT ARE SOLD AND WARRANTED BY A REPUTABLE COMPANY.

⚠️ IT IS HIGHLY RECOMMENDED THAT YOU UTILIZE A SAFETY DEVICE SUCH AS A STEEL CASE OR LiPo SACK™ WHILE CHARGING LITHIUM CHEMISTRY BATTERIES.

⚠️ IT IS HIGHLY RECOMMENDED THAT YOU KEEP AN OPERABLE “CLASS A” FIRE EXTINGUISHER IN THE CHARGING AREA.

**FAIL URE TO FOLLOW THESE WARNINGS CAN BE CONSIDERED NEGLIGENCE BY THE OPERATOR AND MAY NEGATE ANY CLAIMS FOR DAMAGES INCURRED.**

Hitec RCD USA will not be held responsible for any damages or injuries that may occur by persons who fail to follow these warnings or who fail to properly follow the instructions in this manual.
Warning and Safety Notes

Warning: Be sure to read this section for your own safety.

Caution: Be sure to read this section to prevent accidents and damage to your charger.

Tip: This section will help you maximize the performance of your charger.

Note: This section will provide more detailed explanations.

These warnings and safety notes are of the utmost importance. You must follow these instructions for maximum safety. Failure to do so can damage the charger and the battery and in the worst cases, may cause a fire.

NEVER LEAVE THE CHARGER UNATTENDED WHILE IT IS CONNECTED TO ITS POWER SOURCE. IF ANY MALFUNCTION IS FOUND, TERMINATE THE PROCESS AT ONCE AND REFER TO THE OPERATION MANUAL.

⚠️ The allowable DC input voltage is 11-18V DC.

⚠️ The allowable AC input voltage is 100-240V AC.

⚠️ Keep the charger away from dust, damp, rain, heat, direct sunlight and excessive vibration.

⚠️ If the charger is dropped or suffers any type of impact, it should be inspected by an authorized service station before using it again.

⚠️ This charger and the battery should be put on a heat-resistant, non-flammable and non-conductive surface.

⚠️ Never place a charger on a car seat, carpet or similar surface. Keep all flammable volatile materials away from the operating area.

⚠️ Make sure you know the specifications of the battery to be charged or discharged to ensure it meets the requirements of this charger. If the program is set up incorrectly, the battery and charger can be damaged.

⚠️ Fire or explosion can occur due to overcharging.

⚠️ To avoid a short circuit between the charge lead, always connect the charge cable to the charger first, then connect the battery. Reverse the sequence when disconnecting.
Never attempt to charge or discharge the following types of batteries:

- A battery fitted with an integral charge circuit or a protection circuit
- A battery pack which consists of different types of cells (including different manufacturer’s cells)
- A battery that is already fully charged or just slightly discharged and non-rechargeable batteries (these pose an explosion hazard)
- A faulty or damaged battery
- Batteries installed in a device or which are electrically linked to other components
- Batteries that are not expressly stated by the manufacturer to be suitable for the currents the charger delivers during the charge process

PLEASE BEAR IN MIND THE FOLLOWING POINTS BEFORE YOU COMMENCE CHARGING:

- Did you select the Appropriate program suitable for the type of battery you are charging?
- Did you set up the adequate current for charging or discharging?
- Have you checked the battery voltage? Lithium battery packs can be wired in parallel and in series, i.e. a 2-cell pack can be 3.7V (in parallel) or 7.4V (in series).
- Have you checked that all connections are firm and secure?
- Make sure there are no intermittent contacts at any point in the circuit.

### Charging

Before charging your batteries, it is critical that you determine the maximum allowable charge rate for your batteries. The X2 AC Plus Black Edition is capable of charging at high rates that may not be suitable or safe for your particular batteries. For example, Lithium cells are typically safe to charge at 1C, or the total mAh÷1000. A 1200mAh battery would have a 1C charge rate of 1.2 amps. A 4200mAh battery would have a 1C charge rate of 4.2 amps. Some manufacturers are offering Lithium cells that can be charged at greater than 1C but this should ALWAYS be verified before charging a Lithium battery at rates higher than 1C. Voltage is just as critical as the charging amperage rate and this is determined by the number of cells in series, or “S”. For example, a 3S LiPo is rated at 11.1 volts (“S” multiplied by a single LiPo cell with a nominal voltage of 3.7 volts DC. 3 cells x 3.7 volts each equals 11.1 volts DC).

Connect the battery’s main leads to the charger output: red is positive and black is negative. Keep in mind that the gauge or thickness of your charging leads from the X2 AC Plus Black Edition to your battery must be of an acceptable current rating to handle the Applied charge current. For maximum safety and charging effectiveness, always match or exceed the main battery lead rating when assembling or selecting your charging leads. If you charge a battery at a high current rate (amperage) with a charging lead not rated for the chosen amperage, the wire could get hot, catch fire, short out and/or potentially destroy your battery and the charger.

**Warning and Safety Notes**

WHEN ADJUSTING YOUR X2 AC PLUS BLACK EDITION CHARGING PARAMETERS, BE SURE YOU SELECT THE PROPER BATTERY TYPE AND CELL VOLTAGE FOR THE TYPE OF CELL YOU ARE CHARGING. CHARGING BATTERIES WITH THE WRONG SETTINGS MAY CAUSE THE CELLS TO BURST, CATCH FIRE OR EXPLODE.
When in doubt, always use a higher gauge wire (lower AWG number). It is common to see charging leads constructed of 14AWG, 16AWG or 18AWG wire. Always refer to recommendations from your battery manufacturer for your specific battery type and size before initiating a charge or discharge process.

**Do not attempt to disassemble or modify Lithium or Lead-Acid battery packs.**

**Discharging**
The X2 AC Plus Black Edition discharging functions are for two specific purposes:

- Refreshing the capacity of a Nickel-based battery that has lost capacity over time (NiMH or NiCd).
- Reducing the voltage of a Lithium battery for safe storage.

**LITHIUM CHEMISTRY BATTERY PACKS SHOULD ONLY BE DISCHARGED TO THEIR MINIMUM SAFE VOLTAGE, NO LOWER. DEEP DISCHARGING A LITHIUM CELL WILL DO PERMANENT DAMAGE. REFER TO THE STANDARD BATTERY PARAMETERS TABLE ON PAGE 6 OF THIS MANUAL FOR MINIMUM DISCHARGE VOLTAGES.**

**LiPo & LiHV Charge/Discharge Cycling**
Lithium batteries are known to reach full capacity after a break-in period of about 10 charge/discharge cycles. We do not recommend you use the X2 AC Plus Black Edition charger to do this; normal use and recharging will achieve the same results. If you wish to perform a Lithium break-in on the bench with the X2 AC Plus Black Edition, discharging to minimum acceptable voltages and performing a balance charge at 1C maximum rate is recommended. If you choose to break in your Lithium batteries under normal use, charging at only 1C for the first ten cycles will help ensure full performance and service life from your Lithium cells.
Product Layout

- Dot Matrix 128 x 64 LCD Display
- Output Socket 4mm Banana Plug
- Balance Lead Socket
- Temperature Sensor Port
- USB Port
- Micro USB Port for PC Link & firmware upgrade
- Alter Values, See the Status of Individual Cells in Balance Charge Mode
- Resume or Start Charge Processes

Features

**Twin-channel Charger**
X2 AC Plus Black Edition allows you to plug 2 batteries into one charger simultaneously, and it will intelligently and automatically charge 2 batteries at once to their maximum capacity. To top of it, the batteries being charged do not even need to have the same configuration. You can connect different chemistry (LiPo/LiFe/Lilon/LiHV/NiMH/NiCd/Pb) batteries into any of the charging ports.

**Dual Input and Power Distribution:**
The X2 AC Plus Black Edition has a dual AC/DC input comprised of AC 100-240V and DC 11-18V. In DC mode, the power of each channel is 100W with an overall power of 200W. Power distribution is supported in AC mode. For example, if Channel A is 70W and Channel B is 30W, total power is 100W.

**Optimized Operating Software:**
The X2 AC Plus Black Edition features an AUTO function that sets the feeding current during charging or discharging. For lithium batteries especially, this function helps prevent overcharging and its consequences. It can also disconnect the circuit automatically and sound an alarm if an abnormal reaction has been detected. Each programming feature of your X2 AC Plus Black Edition is controlled by two way linkage and communication and is completely customizable to the user’s preferences.

**Battery Memory (Data Store/Load):**
The charger can store up to 10 unique charge/discharge profiles for each channel and lets you recall the data from each program setting at any time.

**PC Control Software “Charge Master”:**
Equipped with free “Charge Master” software, the X2 AC Plus Black Edition gives you unparalleled ability to operate the charger via your personal computer. You can monitor pack voltage, cell voltage, and other data during battery charging or view the charge data in real-time graphs. The “Charge Master” gives you the option to initiate and update firmware as well.

With the “Charger Master” software and a single computer connection, you are able to operate and update two channels at the same time.
Smartphone Control via Bluetooth w/Scan to Go (iOS and Android): The X2 AC Plus Black Edition uses its built-in Bluetooth and the Hitec LinkPower X App to allow the user to control the charger via their iOS or Android Smartphone. This App also offers a unique SCAN TO GO automatic charging system. Users with many different types of batteries will find this feature very useful. The revolutionary SCAN TO GO provides a solution to this problem by allowing the user to assign a QR code which contains all the relevant data for the battery for charging or discharging. The user can create and print a unique QR code by using the Hitec LinkPower X App. Attach the QR code to your battery, then using your Smartphone, launch the Hitec LinkPower X App. All the essential setup information is stored in the QR code. All you need to do is press the Scan button and the charge or discharge process will start automatically.

DC Power Output Port: The X2 AC Plus Black Edition has a DC output port capable of delivering up to 100 watts @ 13.6 volts DC. This eliminates the need to bring a separate power supply to the racing track or flying field.

Internal Independent Lithium Battery Balancer: Hitec’s X2 AC Plus Black Edition employs an individual cell-voltage balancer. It is not necessary to connect an external balancer for balance charging and discharging.

Terminal Voltage Control (TVC): For experienced users, the charger’s end voltage can be reset.

Voice Guide: This feature makes the charger more intuitive and user friendly.

Fast Charge and Storage Mode of Lithium Batteries: The function of these two modes differs from one another. “FAST CHG” minimizes the battery charge time, while “STORAGE” has the capacity to control the final battery voltage, which is necessary and helpful for a rarely used battery.

Re-Peak Mode of NiMH/NiCd Battery: In re-peak charge mode, the charger can peak charge the battery once, twice, or three times in a row automatically. This function is useful for ensuring a full battery charge.
Delta-Peak Sensitivity for NiMH/NiCd:
This automatic charge termination program is based on the principle of the Delta-peak voltage detection. When the battery’s voltage exceeds the threshold, the process will be terminated automatically.

Cyclic Charging/Discharging:
1 to 5 cyclic and continuous charge > discharge or discharge > charge sessions are optimal for battery performance and balancing.

Automatic Charging Current Limit:
You can set the upper limit of the charging current when charging your NiMH or NiCd battery. The ‘AUTO’ charging mode, however, is recommended when charging NiMH batteries with low impedance and capacity.

Battery Voltage Meter:
The user can check the battery’s total voltage, the highest voltage, the lowest voltage and the voltage of each cell.

Battery Internal Resistance Meter:
The user can check the battery’s total internal resistance and the internal resistance of each cell.

Capacity Limit:
The charging capacity is always calculated as the charging current multiplied by time. If the charging capacity exceeds the limit, the process will automatically terminate according to the maximum value previously set.

Temperature Threshold*:
The battery’s internal chemical reaction will cause the temperature of the battery to rise. If the temperature limit is reached, the process will be terminated.

* This function is available by connecting an optional temperature probe which is available as a separate purchase.

Processing Time Limit:
Protect your battery by setting a maximum time limit for charging and discharging.

USB Power 5V/2.1A
You can charge your phone and tablet using the built-in USB power output port.
Battery & Power Supply Connections

**Warning**

TO AVOID SHORT CIRCUITS, ALWAYS CONNECT THE CHARGE LEADS TO THE CHARGER FIRST, AND THEN TO THE BATTERY. REVERSE THE SEQUENCE WHEN DISCONNECTING THE PACK.

**Battery Connection with Balance Adaptor.**

**Battery Connection without Balance Adaptor.**

**12VDC Battery / DC Power Supply Connection.**

* 12V DC battery or 11–18V DC, 30 amp power supply
Operation

Here is the detailed procedure to operate the X2 AC Plus Black Edition. All screens and operations will take LiPo BALANCE CHARGE program for example,

Note: We will explain the operating procedure of one channel as the procedure for channel A and B is identical.

Connection

Connecting to power source
There are two kinds of inputs for X2 AC Plus Black Edition, DC 11-18V and AC 100-240V.

A. Operating in AC mode
X2 AC Plus Black Edition comes with built-in switching power supply. You can connect the AC power cord directly to the main AC socket. (100-240V AC).

Note: The output power in AC mode is 100W totally for Channel A, Channel B and Power supply.

In AC mode, it supports Power Distribution. The total power for Channel A, Channel B and power supply is 100W. You could set the Max Power for one output port (Take Channel A for example) as following,

```
A
| DC SUPPLY: 20W |
| CHA: 50W  CHB: 30W |

B
| DC SUPPLY: 20W |
| CHA: 50W  CHB: 30W |
```

Then, the channel B and DC power supply will take the rest power automatically (For example, if you set DC power supply as 20W and Channel A as 50W, the Channel B will take the rest power of 30W. If Channel A / Channel B and DC power supply are both working, you can't change the power for them. If DC power supply is working, you can change the power of Channel A and Channel B. Thus, the DC power supply will take the rest power automatically.

B. Operating in DC mode
Please connect X2 AC Plus Black Edition with AC / DC power supply by supplied DC input cable. You can also use terminal clips with DC connectors to attach directly to 12V car batteries. It is critically important that you use either a fully charged 13.8V car battery or a high-quality AC / DC power supply in the range of 11-18V DC output with a minimum power of 300W or higher to insure reliable performance.
Connecting the battery

IMPORTANT: Before connecting a battery it is absolutely essential to check one last time that you have set the parameters correctly. If the settings are incorrect, the battery may be damaged and could potentially burst into flames or explode. To avoid short circuits between the banana plugs, always connect the charge leads to the charger first and then to the battery. Reverse the sequence when disconnecting the pack.

Balance Socket

The balance wire attached to the battery must be connected to the charger with the black wire aligned with the negative marking. Take care to maintain correct polarity!

(See the wiring diagram below.)

This diagram shows the correct way to connect your battery to the X2 AC Plus Black Edition while charging.

**Warning**

TO AVOID SHORT CIRCUIT BETWEEN THE CHARGE LEAD ALWAYS CONNECT THE CHARGE CABLE TO THE CHARGER FIRST, THEN CONNECT THE BATTERY. REVERSE THE SEQUENCE WHEN DISCONNECTING.
**Operation [cont.]**

**CH A / CH B:**
Switch from Channel A to B or from Channel B to A.

**BATT PROG / STOP Button:**
Stop a function in-progress or to go back to previous step/screen.

**DEC Button:**
Scroll through menus or decrease the parameter value.

**INC Button:**
Scroll through the menus or increase the parameter value.

**ENTER / START Button:**
Enter parameters or store parameters on-screen.

When changing a parameter value in the program, press the START/ENTER button to make it blink, then change the value by pressing the DEC and INC button. The value will be stored by repressing the START/ENTER button. If there is a second parameter to edit on the same screen, it will begin blinking after you confirm the first parameter value.

When you power the charger on, it will automatically enter the LiPo Battery balance program screen. You can change the mode (balance mode, normal charge mode, fast charge mode, store mode, or discharge mode), enter the desired charging/discharging mode, or set the preferred parameter to begin. If there are no changes to make in the LiPo Battery program, press the BATT PROG/STOP button to enter the BATT PROGRAM screen.
Program Flow Chart

The flow chart depicts one channel as the example for both channels. Channel A and Channel B are identical.
Charger Operation

The following section contains detailed procedures that must be followed to make the charger work. When you power the charger on, it will automatically enter the LiPo Battery balance program screen. Use the CHA/CHB button to toggle between channels A and B and the BATT PROG/STOP button to enter the BATT PROGRAM screen. Once in the Battery Programming section use the < or > to select the desire battery or function then press ENTER/Start to make your parameter adjustments. The X2 AC Plus Black Edition is capable of the following processes based on the type of battery chosen.

Lithium Battery Program [LiPo/LiHV/LiFe/Lilon]

Lithium:
This program is only suitable for charging/discharging Lithium chemistry batteries (LiPo, LiHV, Lilon and LiFe).

The X2 AC Plus Black Edition offers the following lithium charge modes: Charge, Balance Charge, Fast Charge, Storage and Discharge.

BEFORE SELECTING A CHARGE MODE, IT IS CRITICAL THAT YOU SELECT THE CORRECT TYPE OF LITHIUM BATTERY TO BE CHARGED. FAILURE TO DO SO CAN RESULT IN DAMAGE TO THE BATTERY AND POSSIBLE EXPLOSION.

Selecting a Lithium Battery Type:
From the “BATT/PROGRAM” screen, press the INC. – or DEC + button to scroll through the battery type selections. Once you have selected the correct battery type, press the ENTER/Start button to enter the charge/discharge menu.

Lithium Charge Mode:

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

IN THE CHARGE MODE, LITHIUM BATTERIES CAN BE CHARGED WITHOUT THE USE OF A BALANCE ADAPTOR. A BALANCE ADAPTOR CAN BE USED, BUT IT IS NOT REQUIRED. BALANCE CHARGE MODE IS RECOMMENDED FOR ANY BATTERY WITH A BALANCE LEAD.

See page 12 for the Appropriate charging connections setup for this operation.

First, select the correct battery type by following the instructions page 16. Once you have set the correct battery type, press the ► button once to enter the charge mode and battery settings screen, use the INC. – or DEC + to select “CHARGE” mode. Press the ► button again and the amp rate value will begin flashing. Use the + or — buttons to adjust the value to the desired rate. Follow the instructions provided with your battery when setting the charge amperage rate.

Press the ► button again and the voltage value will begin flashing. Use the + or — buttons to adjust the value to the desired rate. The voltage and cell count should match the values listed on the battery label.
Lithium Battery Program [LiPo/LiHV/LiFe/Lilon cont.]

You are now ready to begin charging. Press and hold the ENTER/Start button until you see “BATTERY CHECK.” followed by the “CONFIRM (ENTER) / CANCEL (STOP)” screen. This screen displays the number of cells you set up as “R” and the number of cells detected by the processor as “S”. If both numbers are identical, you may press and hold the ENTER/Start button to confirm and begin charging. If these numbers do not match, press the BATT/PROG Stop button to return to the previous screen and carefully check the number of cells of the battery pack before proceeding.

DURING CHARGING/DISCHARGING, THE BATTERY SHOULD BE PLACED INSIDE A FIRE PROOF/RETARDANT BAG AND ON A FIRE PROOF SURFACE AWAY FROM OTHER COMBUSTIBLE OBJECTS.

Once charging has commenced, the charger will display the following real-time information: battery type/cell count, charging current, battery voltage, charging time and charged capacity.

If you are using a balance adaptor during charging, you may press the + button to view the voltage of each individual cell. You can also view a variety of other information as detailed on page 13.

Once the battery is fully charged the screen will read “FINISHED” and the charger will emit a chiming sound. Press the button to stop charging. You may also press the button at any time during the charging process to stop charging.

Lithium Balance Charge Mode:

This function is for balancing the voltage of individual Lithium-polymer battery cells while charging. In order to use the Balance Mode, the battery must have a balance lead. Charging in this mode is different from the normal modes because the built-in processor monitors the voltage of each individual cell and controls the discharge of each individual cell in order to equalize the voltage. Use of a balance adaptor with any battery that has a balance lead will improve the performance and lifespan of your battery.

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.
Lithium Battery Program [LiPo/LiHV/LiFe/Lilon cont.]

See page 12 for the Appropriate charging connections setup for this operation.

First, select the correct battery type by following the instructions on page 16. Once you have set the correct battery type, press the ► button once to enter the charge mode and battery settings screen, use the INC. – or DEC + to select “BALANCE” mode. Press the ► button again and the amp rate value will begin flashing. Use the + or – buttons to adjust the value to the desired rate. Follow the instructions provided with your battery when setting the charge amperage rate.

Press the ► button again and the voltage value will begin flashing. Use the + or – buttons to adjust the value to the desired rate. The voltage and cell count should match the values listed on the battery label.

You are now ready to begin charging. Press and hold the ENTER/Start ► button until you see “BATTERY CHECK.” followed by the “CONFIRM (ENTER) / CANCEL (STOP)” screen. This screen displays the number of cells you set up as “R” and the number of cells detected by the processor as “S”. If both numbers are identical, you may press and hold the ENTER/Start ► button to confirm and begin charging. If these numbers do not match, press the BATT/PROG Stop ■ button to return to the previous screen and carefully check the number of cells of the battery pack before proceeding.

DURING CHARGING/DISCHARGING, THE BATTERY SHOULD BE PLACED INSIDE A FIRE PROOF/RETARDANT BAG AND ON A FIRE PROOF SURFACE AWAY FROM OTHER COMBUSTIBLE OBJECTS.

Once charging has commenced, the charger will display the following real-time information: battery type/cell count, charging current, battery voltage, charging time and charged capacity.

To view the voltage of each individual cell charging, press the + button. You can also view a variety of other information as detailed on page 12.

Once the battery is fully charged the screen will read “FINISHED” and the charger will emit a chiming sound. Press the ■ button to stop charging. You may also press the ■ button at any time during the charging process to stop charging.
Lithium Fast Charge Mode:

Charging in Fast Charge Mode allows for a shorter charge time and will result in a slightly reduced charging capacity. To achieve maximum charge capacity, we recommend you use the Lithium Balance Charge Mode. If a fast charge is necessary, select the fast charge mode and follow the same charging instructions as for the Lithium Charge Mode or Lithium Balance Charge Mode.

**BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.**

**Warning**

**Note**

IN THE CHARGE MODE, LITHIUM BATTERIES CAN BE CHARGED WITHOUT THE USE OF A BALANCE ADAPTOR. A BALANCE ADAPTOR CAN BE USED, BUT IT IS NOT REQUIRED. BALANCE CHARGE MODE IS RECOMMENDED FOR ANY BATTERY WITH A BALANCE LEAD.

See page 12 for the Appropriate charging connections setup for this operation.

First, select the correct battery type by following the instructions above. Once you have set the correct battery type, press the ► button once to enter the charge mode and battery settings screen, use the INC. – or DEC + to select “FAST CHG” mode. Press the ► button again and the amp rate value will begin flashing. Use the + or – buttons to adjust the value to the desired rate. Follow the instructions provided with your battery when setting the charge amperage rate.

Press the ► button again and the voltage value will begin flashing. Use the + or – buttons to adjust the value to the desired rate. The voltage and cell count should match the values listed on the battery label.

You are now ready to begin charging. Press and hold the ENTER/Start ► button until you see “BATTERY CHECK.” followed by the “CONFIRM (ENTER) / CANCEL (STOP)” screen. This screen displays the number of cells you set up as “R” and the number of cells detected by the processor as “S”. If both numbers are identical, you may press and hold the ENTER/Start ► button to confirm and begin charging. If these numbers do not match, press the BATT/PROG Stop ■ button to return to the previous screen and carefully check the number of cells of the battery pack before proceeding.
DURING CHARGING/DISCHARGING, THE BATTERY SHOULD BE PLACED INSIDE A FIRE PROOF/RETARDANT BAG AND ON A FIRE PROOF SURFACE AWAY FROM OTHER COMBUSTIBLE OBJECTS.

Once charging has commenced, the charger will display the following real-time information: battery type/cell count, charging current, battery voltage, charging time and charged capacity.

If you are using a balance adaptor during charging, you may press the \[\text{+}\] button to view the voltage of each individual cell. You can also view a variety of other information as detailed on page 13.

Once the battery is fully charged the screen will read “FINISHED” and the charger will emit a chiming sound. Press the \[\text{■}\] button to stop charging. You may also press the \[\text{■}\] button at any time during the charging process to stop charging.

**Lithium Storage Mode:**

This function is for charging/discharging batteries that will not be used immediately. The program is designed for charging/discharging batteries up-to or down-to safe storage levels. The program will automatically begin to discharge if the current state of the battery exceeds the voltage level for storage.

Before you begin charging your battery, make sure you have read and understand all of the warnings and safety information contained on pages 02-07.

In storage mode, lithium batteries can be charged without the use of a balance adaptor. A balance adapter can be used, but it is not required. Balance charge mode is recommended for any battery with a balance lead.

See page 12 for the appropriate charging connections setup for this operation.

First, select the correct battery type by following the instructions above. Once you have set the correct battery type, press the \[\text{►}\] button once to enter the charge mode and battery settings screen, use the INC. – or DEC + to select “STORAGE” mode. Press the \[\text{►}\] button again and the amp rate value will begin flashing. Use the + or \[\text{■}\] buttons to adjust the value to the desired rate. Follow the instructions provided with your battery when setting the charge amperage rate.
Press the ► button again and the voltage value will begin flashing. Use the + or — buttons to adjust the value to the desired rate. The voltage and cell count should match the values listed on the battery label.

You are now ready to begin charging. Press and hold the ENTER/Start ► button until you see “BATTERY CHECK.” followed by the “CONFIRM (ENTER) / CANCEL (STOP)” screen. This screen displays the number of cells you set up as “R” and the number of cells detected by the processor as “S”. If both numbers are identical, you may press and hold the ENTER/Start ► button to confirm and begin charging. If these numbers do not match, press the BATT/PROG Stop ■ button to return to the previous screen and carefully check the number of cells of the battery pack before proceeding.

**DURING CHARGING/DISCHARGING, THE BATTERY SHOULD BE PLACED INSIDE A FIRE PROOF/RETARDANT BAG AND ON A FIRE PROOF SURFACE AWAY FROM OTHER COMBUSTIBLE OBJECTS.**

Once charging has commenced, the charger will display the following real-time information: battery type/cell count, charging current, battery voltage, charging time and charged capacity.

If you are using a balance adaptor during charging, you may press the + button to view the voltage of each individual cell. You can also view a variety of other information as detailed on page 13.

Once the battery has reached storage level the screen will read “STORAGE FINISHED” and the charger will emit a chiming sound. Press the ■ button to stop charging. You may also press the ■ button at any time during the charging process to stop charging.

**Lithium Discharge Mode:**

If you plan to discharge your battery to reach safe storage levels, we strongly recommend that you use Storage Mode. In very few instances should discharging become necessary with LiPo batteries. One such instance may include preparing a battery for disposal, in which case the battery should not be completely discharged. Be sure to follow the discharging instructions provided by the battery manufacturer. **Over-discharging a battery can severely damage the battery and may cause a fire or explosion.**
**Lithium Battery Program** [LiPo/LiHV/LiFe/Lilon cont.]

**Warning**

Discharging lithium chemistry batteries can cause permanent damage to the battery and it is not recommended for anything other than the disposal of the battery. If you choose to discharge your lithium batteries, make sure to pay close attention to the minimum voltage setting. If you want to store your battery for a long period of time you should utilize the storage mode charge program as this is the safest method of storing your lithium chemistry batteries.

In discharge mode, lithium batteries can be discharged with or without the use of a balance adaptor. The use of a balance adaptor is recommended for discharging any battery that has a balance lead.

See page 12 for the appropriate charging connections setup for this operation.

First, select the correct battery type by following the instructions above. Once you have set the correct battery type, press the ► button once to enter the charge mode and battery settings screen, use the INC – or DEC + to select “discharge” mode. Press the ► button again and the amp rate value will begin flashing. Use the + or ▪ buttons to adjust the value to the desired rate. Follow the instructions provided with your battery when setting the charge amperage rate.

Press the ► button again and the voltage value will begin flashing. Use the + or ▪ buttons to adjust the value to the desired rate. The voltage and cell count should match the values listed on the battery label.

You are now ready to begin charging. Press and hold the ENTER/Start ► button until you see “battery check.” followed by the “confirm (enter) / cancel (stop)” screen. This screen displays the number of cells you set up as “R” and the number of cells detected by the processor as “S”. If both numbers are identical, you may press and hold the ENTER/Start ► button to confirm and begin charging. If these numbers do not match, press the BATT/PROG Stop ■ button to return to the previous screen and carefully check the number of cells of the battery pack before proceeding.
DURING CHARGING/DISCHARGING, THE BATTERY SHOULD BE PLACED INSIDE A FIRE PROOF/RETARDANT BAG AND ON A FIRE PROOF SURFACE AWAY FROM OTHER COMBUSTIBLE OBJECTS.

Once charging has commenced, the charger will display the following real-time information: battery type/cell count, charging current, battery voltage, charging time and charged capacity.

If you are using a balance adaptor during charging, you may press the + button to view the voltage of each individual cell. You can also view a variety of other information as detailed on page 13.

Once the battery has reached storage level the screen will read “FINISHED” and the charger will emit a chiming sound. Press the ■ button to stop charging. You may also press the ■ button at any time during the charging process to stop charging.

Additional Lithium Battery Process Information:

During the Lithium battery charging/discharging process the X2 AC Plus Black Edition can display a variety of information. Pressing the + button allows you to see the following:

Voltage of each cell.

API1 Charge capacity percentage and average cell voltage.

Pressing the — button will display this information.

Final voltage setting

Input voltage

Internal/external temperature*

Cut-off temperature

Safety timer settings

Capacity cut off settings

*Requires optional temperature sensor. (Part#: 44159)
NiCd/NiMH Battery Program

NiCd/NiMH:
This program is only suitable for charging/discharging NiCd/NiMH batteries. The X2 AC Plus Black Edition offers the following NiCd/NiMH charge modes: Charge, Auto Charge, Discharge, Re-Peak and Cycle.

Selecting the Battery Type:
After powering on the X2 AC Plus Black Edition, press the ■ button repeatedly until you reach the Appropriate program for the battery type you wish to charge. For this example we have chosen the “NiMH BATT” or “NiCd BATT” program. Now press the ► button to enter the desired program.

NiCd/NiMH Charge Mode:

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

After selecting the correct battery type, if the screen does not read “CHARGE”, use the + or — buttons to change it to the “CHARGE” mode.

Press the ► button and the amp rate value will begin flashing. Use the + or — buttons to adjust the value to the desired rate. Follow the instructions provided with your battery when setting the amperage rate.

Press and hold the ► button to begin charging.

Once charging has commenced, the charger will display the following real-time information: battery type, charging current, battery voltage, charging time and charged capacity. Once the battery is fully charged, the screen will read “END: FINISH” and the charger will emit a chiming sound. You can press the ■ button at any time during the charging process to stop charging.
NiCd/NiMH Battery Program [cont.]

NiCd/NiMH Auto Charge Mode:

In this mode, the charger automatically detects the connected NiMH or NiCd battery and determines the proper full charge and cutoff thresholds. Setting the upper charge current limit for safe levels based on your battery specifications will ensure safe charging of your specific battery. If you are unsure of the maximum allowable charge rates, set the charger to a maximum of 1C (battery mAh/1000, i.e., 2500mAh = 2.5A).

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

After selecting the correct battery type, use the + or – buttons to change the charge mode to the “Auto CHARGE” setting.

Press the ► button and the amp rate value will begin flashing. Use the + or – buttons to adjust the value to the desired rate. Follow the instructions provided with your battery when setting the upper charge amperage rate.

Press and hold the ► button to begin charging.

Once charging has commenced, the charger will display the following real-time information: battery type, charging current, battery voltage, charging time and charged capacity.

Once the battery is fully charged, the screen will read “END: FINISHED” and the charger will emit a chiming sound. You can press the ■ button at any time during the charging process to stop charging.

NiCd/NiMH Discharge Mode:

BEFORE YOU BEGIN DISCHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

After selecting the correct battery type, use the + or – buttons to select the “DISCHARGE” mode. Press the ► button and the amp rate value will begin flashing. Use the + or – buttons to adjust the value to the desired discharge rate. Press the ► button again and the voltage cutoff will begin to flash. Use the + or – buttons to adjust the value to the desired rate.
NiCd/NiMH Battery Program [cont.]

Follow the instructions provided with your battery when setting the voltage cutoff. The X2 AC Plus Black Edition will stop discharging when the battery has reached the preset voltage cutoff.

Press and hold the ▶ button to begin discharging. Once discharging has commenced, the charger will display the following real-time information: battery type, discharging current, battery voltage, discharging time and discharged capacity.

When discharging is complete, the screen will read “END: CUTOFF-VOL” and the charger will emit a chiming sound. The charger will display the elapsed time, end voltage and number of mAh discharged.

You can press the ■ button at any time during the charging process to stop the discharge process.

NiCd/NiMH Re-Peak Mode:

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

Applicable to NiMH and NiCd batteries only, in re-peak mode the charger can peak charge the battery once, twice, or three times in a row automatically. This process is good for confirming the battery is fully charged and for verifying how well the battery can accept a fast charge. A five-minute cool-down delay occurs after each re-peak charge.

IN RE-PEAK MODE, THE X2 AC PLUS BLACK EDITION USES THE CHARGE AMPERAGE AND VOLTAGE SETTINGS ENTERED IN CHARGE MODE (SEE PAGE 16).

After selecting the correct battery type, use the + or – buttons to select to the “RE-PEAK” mode. Press the ▶ button and Re-peak cycle number 1 begins to flash on the screen. Use the + or – buttons the dial once will allow you to scroll through and set up to 3 total cycles.

Press the ▶ button to begin the re-peak process.
NiCd/NiMH Battery Program [cont.]

Once Re-Peak process has begun, the charger will display the following real-time information: battery type, charging current, battery voltage, elapsed time and charged capacity.

Once the Re-Peak process has completed, the screen will read “END: RE-PEAK” and the charger will emit a chiming sound. The X2 AC Plus Black Edition will display the charge/discharge capacity for each cycle. Using the + and - buttons, you can scroll through this data for each cycle.

NiCd/NiMH Cycle Mode:
The X2 AC Plus Black Edition makes cycling of NiCd/NiMH batteries easy. The process of discharging and recharging (cycling) can be achieved automatically with one simple step and will improve the performance of NiCd/NiMH batteries. We strongly recommend cycling any battery that has been discharged and stored for a period of time. This will increase battery life and improve performance.

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

After selecting the correct battery type, use the + or - buttons to select to the “CYCLE” mode. The Cycle Mode gives you two cycling options: “DCHG>CHG” or “CHG>DCHG”. The “DCHG>CHG” option will first discharge the battery and then charge the battery.

The “CHG>DCHG” option will first charge the battery and then discharge the battery. If this screen does not currently show the cycling option you desire, press the ▶ button once and this setting will begin flashing. Use the + or - buttons to change this setting.

Pressing the ▶ button again will cause the number of cycles option to begin flashing. Use the + or - buttons to change this to the number of cycles you want the X2 AC Plus Black Edition to run. The X2 AC Plus Black Edition can cycle the battery a maximum of 5 times consecutively.

Press and hold the ▶ button and cycling will begin.
Once cycling has commenced, the charger will display the following real-time information: battery type, charging/discharging current, battery voltage, charging time and charged capacity. You will also see “D>C” or “C>D”. This will indicate which cycling order you have chosen. Either “D” or “C” will be flashing. This flashing indicates which part of the cycle is currently being executed.

Once the cycling process is complete, the screen will read “END: CYCLE” and the charger will emit a chiming sound. The X2 AC Plus Black Edition will display the charge/discharge capacity for each cycle. Using the + and — buttons, you can scroll through this data for each cycle.

Additional NiCd/NiMH Process Information:

During the NiMH/NiCd battery charging/discharging process the X2 AC Plus Black Edition can display a variety of information, using the + or — buttons you can also view the following information:

- **NiMH 0.5A 9.6V**
- **D > C 00:00:00**

**Delta Peak Sensitivity**

- **D.Peak 4mV/CELL**

**In Power Voltage**

- **12.56V**

**Input Voltage**

**External*/internal Temperatures**

- **Ext. Temp ---**
- **Int. Temp 37°C**

**Temperature Cut-off**

- **50°C**

**Capacity Cut-off Setting**

- **5000mAh**

**Safety Timer Setting**

- **ON 200min**

*Requires optional temperature sensor. (Part#: 44159)

## Pb Lead-Acid Battery Program

**Pb (Lead-Acid):**

This program is only suitable for charging Pb (lead-acid) batteries with nominal voltages of 2 to 20V. A Pb (lead-acid) battery is significantly different from NiCd/NiMH batteries. Pb batteries can only deliver current lower in comparison to their capacity. The same restriction applies to the charging process. Consequently, the optimum charge current can only be 1/10 of the capacity. A Pb battery cannot be used for fast charging. Please follow the instructions provided by the battery manufacturer.

The X2 AC Plus Black Edition offers the following Pb charge modes: Charge and Discharge.
Pb Charge Mode:

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

After selecting the correct battery type, use the + or — buttons to change it to the “CHARGE” mode.

Press the ▶ button and the amp rate value will begin flashing. Use the + or — buttons to adjust the value to the desired charge rate. The amp rate should be set to 1/10 of capacity. For example if you are charging a 7Ah battery the charge rate should be set to 0.7A. Follow the instructions provided with your battery when setting the amp rate.

Press the ▶ button again and the voltage rate value will begin flashing. Use the + or — buttons to set the voltage and number of cells.

Press and hold the ▶ button and charging will begin.

Once charging has commenced, the charger will display the following real-time information: battery type, charging current, battery voltage, charging time and charged capacity.

When charging is complete, the screen will read “FINISHED” and the charger will emit a chiming sound.

Pb Discharge Mode:

BEFORE YOU BEGIN CHARGING YOUR BATTERY, MAKE SURE YOU HAVE READ AND UNDERSTAND ALL OF THE WARNINGS AND SAFETY INFORMATION CONTAINED ON PAGES 02-07.

After selecting the correct battery type, use the + or — buttons to change it to the “DISCHARGE” mode.

Press the ▶ button and the amp rate value will begin flashing. Use the + or — buttons to adjust the value to the desired charge rate. The amp rate should be set to 1/10 of capacity. For example if you are discharging a 7Ah battery the discharge rate should be set to 0.7A. Follow the instructions provided with your battery when setting the amp rate.
Pb Lead-Acid Battery Program [cont.]

Press the ► button again and the voltage rate value will begin flashing. Use the + or — buttons to set the voltage and number of cells.

Press and hold the ► button and discharging will begin.

Once charging has commenced, the charger will display the following real-time information: battery type, charging current, battery voltage, charging time and charged capacity.

When charging is complete, the screen will read “FINISHED” and the charger will emit a chiming sound.

**Additional Pb Process Information:**

During the Pb battery charging/discharging process the X2 AC Plus Black Edition can display a variety of information. Using the + or - buttons you can also view the following information:

<table>
<thead>
<tr>
<th>Capacity Cut-Off</th>
<th>Safety Time</th>
<th>Temp Cut-off</th>
<th>Ext. Temp</th>
<th>Int. Temp</th>
<th>Input Voltage</th>
</tr>
</thead>
<tbody>
<tr>
<td>ON 5000mAh</td>
<td>ON 200min</td>
<td>50°C</td>
<td>----</td>
<td>37°C</td>
<td>12.56V</td>
</tr>
</tbody>
</table>

*Requires optional temperature sensor. (Part#: 44159)
To use the X2 AC Plus Black Edition as a power supply, the user must connect the charger to an AC power source. When the green LED on the back side turns on, the user is free to use the power supply. The power of the DC output is adjustable from 10W to 100W and the output voltage is 13.8V. The power of DC output is shared with charger power. When you increase the power of DC output, the charger power will be decreased accordingly.

(DC Power + Channel A + Channel B = 100 Watts).

Operating Instruction

Press ENTER to enter the DC Power Supply program.

Set the output power for the DC charger or other devices. (please note the voltage is 13.8V)

Set the power of channel A and channel B and the power supply will take the rest power automatically.

Caution: The maximum DC Power output is 100 Watts. Please check the total loading of your equipment before using DC power supply.

If the DC power supply is over load, the led light will flash red and stop working.
Battery Voltage Meter

Battery Voltage Meter:

You can use the battery meter function to check your battery’s total voltage, the highest voltage, the lowest voltage, and the voltage of each cell. Simply connect the battery to the charger via the main battery lead to the battery socket and the balance wires to the balance socket as shown below.

From the BATT/PROGRAM menu use the + or ▼ buttons to scroll to the BATT METER program, press the ENTER/Start button to enter the battery meter program.

The first screen indicates each cell’s voltage.

Press the + or ▼ buttons to view the packs total voltage and the cell with the highest and lowest voltage.
Battery Resistance Measurement:

The X2 AC Plus Black Edition has the ability to check your battery’s total internal resistance, highest total resistance, lowest total resistance and the resistance of each cell. Simply connect the battery to the charger via the main battery lead to battery socket and the balance wires to the balance socket as shown below.

From the BATT/PROGRAM menu use the + or ▼ buttons to scroll to the BATT RESISTANCE program, press the ENTER/Start ▶ button to enter the battery resistance meter program.

The first screen indicates each cell’s internal resistance.

Press the + or ▼ buttons to view the packs total voltage and the cell with the highest and lowest internal resistance.
Memory Preset - Data Save/Load:

The Save Data and Load Data programs make it easy to store and load charge and discharge profiles for up to 10 batteries per channel. Data can be saved for each battery type and each charge mode available with the X2 AC Plus Black Edition. This allows you to recall data for each battery when charging or discharging without having to set up the program over again. You can also edit settings for each saved battery.

**Save Data:**

From the BATT/PROGRAM menu use the + or - buttons to scroll to the BATT MEMORY program and press the ENTER/Start button to enter the battery memory program. In the corner of the screen you will see the number 1 flashing, use the + or - buttons to scroll through the memories. When you are ready to select a memory to program, press the ► button again to enter the memory setup menu.

Press the ► button again and the battery type will begin to flash. Use the + or - buttons to select the battery type (LiPo, LiFe, Lilon, LiHV, NiMH, NiCd or Pb, then press the ► button to confirm your selection.

Now you will use + or - buttons to scroll through the battery parameters, using the + you will make adjustments in the following order, using the - button will reverse this order.

**Voltage and Number of Cells:** Press the ► button and the number of cells will begin to flash. Use the + or - buttons to change the cell count then press the ► button to confirm your selection.

**Charge Current:** Press the ► button and the charge current value will begin to flash. Use the + or - buttons to change the charge current then press the ► button to confirm your selection.

**Discharge Current:** Press the ► button and the discharge current value will begin to flash. Use the + or - buttons to change the discharge current then press the ► button to confirm your selection.
Per Cell Discharge Voltage: Press the ► button and the per cell discharge voltage value will begin to flash. Use the + or — buttons to change the per cell discharge voltage, then press the ► button to confirm your selection.

MAKE SURE TO FOLLOW YOUR BATTERY MANUFACTURERS
RECOMMENDATIONS REGARDING DISCHARGING. FAILURE TO DO SO
MAY DESTROY THE BATTERY OR RENDER IT UNSAFE FOR USE.

Terminal Voltage: Press the ► button and the terminal voltage value will begin to flash. Use the + or — buttons to change the terminal voltage, and then press the ► button to confirm your selection.

CHANGING THE TERMINAL VOLTAGE IS ONLY INTENDED FOR EXPERT
USERS, ANY CHANGES TO DEFAULT SETTINGS ARE COMPLETELY AT YOUR
OWN RISK.

Save Program: Press the ► button to save the program.

SAVE..... will Appear momentarily while the program is written to the memory.

Once saved the screen indicate the memory number, battery type, cell count, charge current and discharge current.

Recall Memory:

From the BATT/PROGRAM menu use the + or — buttons to scroll to the BATT MEMORY program and press ► button to enter the battery memory program. Use the + or — buttons to scroll through the memories. When you have found the memory you would like to use press and the ► button again to recall the memory.

Use the + or — buttons to scroll the available process (charge, discharge, balance charge etc.). Select the process you would like to execute for the battery then press and hold the ► button for 3 seconds to begin the selected process.
Advanced System Set Up

The system will be set to its default parameters when powered on for the first time. The screen displays the following information in sequence and the user can change any given value on each screen.

To change a parameter value in the program, press START/ENTER to make that value blink. Next, change the value by pressing INC or DEC. The value will be stored by pressing START/ENTER once.

Warning and Error Messages

In the case of an error, the screen will communicate the cause of the error and emit an audible sound.

- **REVERSE POLARITY**: An incorrect polarity is detected.
- **CONNECTION BREAK**: The battery has been interrupted.
- **CONNECT ERROR CHECK MAIN PORT**: The battery connection is incorrect.
- **BALANCE CONNECT ERROR**: The balance connect is incorrect.
- **DC IN TOO LOW**: The input voltage is less than 11V.
- **DC IN TOO HIGH**: The input voltage is higher than 18V.
- **CELL ERROR LOW VOLTAGE**: The voltage of one cell in the battery pack is too low.
- **CELL ERROR HIGH VOLTAGE**: The voltage of one cell in the battery pack is too high.
- **CELL ERROR VOLTAGE-INVALID**: The voltage of one cell in the battery pack is invalid.
- **CELL NUMBER INCORRECT**: The cell number is wrong.
- **INT. TEMP. TOO HI**: The internal temperature of the unit is too high.
- **EXT. TEMP. TOO HI**: The external temperature of the battery is too high.
- **OVER CHARGE CAPACITY LIMIT**: The battery capacity is more than the maximum capacity set by the user.
- **OVER TIME LIMIT**: The charging time is longer than the maximum charging time set by the user.
- **BATTERY WAS FULL**: The battery voltage is higher than the maximum voltage set by the user when charging in balance mode.
Using the Charge Control Software [Charge Master]

The free “Charge Master” software gives you unparalleled ability to operate the charger through your computer. You can monitor pack voltage, cell voltage, and other data during charging, view the charge data in real-time graphs, or control charging and firmware updates from the “Charge Master.”

In order to connect the charger to a computer and enjoy the benefits of the “Charge Master” program, you will need a USB cable which is not included in this package. The cable must have an “A” plug on one end and a “micro-B” plug on the other to connect to the charger directly.

You can control, monitor, operate, and upgrade two channels with one computer. The “Charge Master” is available for download at www.hitecrccd.com.

Charger Operation Using the App

The Bluetooth 4.0 connectivity allows the user to control and monitor the X2 AC Plus Black Edition comfortably through an App on most portable devices such as your Smartphone and iPad. The iOS App can be downloaded from the iTunes store, while the Android App can be downloaded from the Google Play Store. Operation of the App is self-explanatory and the same for both iOS and Android. Explicit pairing is not required; after downloading and installing, activate the Bluetooth on your mobile device and launch the App. The X2 AC Plus Black Edition and your device will establish Bluetooth connectivity automatically.

Scan the QR code on the right to download the LinkPower X App using your portable device.

OPERATION

1. Using the power cord, plug the X2 AC Plus Black Edition into the outlet (100~240V AC, 50/60Hz).
2. Connect the batteries to the corresponding channels.
3. Enable Bluetooth function on your portable device and launch the LinkPower X.

1. **Launch the App and set the password (Please do not set the password to 5793 which is reserved for the system itself)**
**How to reset password**

- Press ENTER button
- Press DEC twice
- Press and hold the ENTER button for 3 seconds to reset password.

**2. Operation Steps for Charging (6S LiPo battery for example)**

Connect the batteries to the corresponding channels, select battery type and cells. Press “NEXT” to set the proper charge current.
3. How to Use the Memory Program

Press the “PROGRAM” button

Enter the PROGRAM interface

Set battery type, cells and working modes

Press to save the program after setting the charge current and voltage cut-off

Memory program setting completed

Press “START” button to start charging, Press “EDIT” button to change the setting
4. **System Setting**

5. **SCAN TO GO**

A very unique feature of the X2 AC Plus Black Edition is SCAN TO GO (automatic charging system). As the range of battery types and capacity becomes more varied, each battery requires its own dedicated charging process. **Note:** It is easy to set up the charger incorrectly for a specific type of battery, resulting in battery damage or possible injury.

The revolutionary SCAN TO GO provides a solution to this problem by allowing the user to assign a QR code. This QR code will contain all relevant data for the battery’s charging or discharging. The user can create a unique QR code by using the LinkPower X App. Once complete, the user will print and paste the QR code on the battery.

Use your Smartphone to launch the LinkPower X App containing all the essential information stored in the QR code. All you need to do is press the Scan button and the charge or discharge process will start automatically.
Charger Operation Using the App [cont.]

How to print the QR code

Press the QR code

Save the QR code to Gallery

Open Gallery

Select the QR code and open it

You can print it from your portable device or send the QR code image to your computer to print it out

Attach the printed QR code to the battery

Scan to charge

Press “SCAN TO GO”

Select corresponding channels

Scan to launch the program
Commonly Used Terms:

A, mA: Unit of measurement relating to a charge or discharge current. 1000 mA = 1A (A = Ampere, mA = Milliampere).

Ah, mAh: Unit of measurement for the capacity of a battery (Amperes x Time Unit; h = hour). If a pack is charged for one hour at a current of 2A, it has been fed 2Ah of energy. It receives the same quantity of charge (2Ah) if it is charged for 4 hours at 0.5A, or 15 minutes (=1/4 hour) at 8A.

‘C’ - Rating: Capacity is also referred to as the ‘C’ rating. Some battery suppliers recommend charge and discharge currents based on the battery ‘C’ rating. A battery’s ‘1C’ current is the same number as the battery’s rated capacity number, but noted in mA or amps. A 600mAh battery has a 1C current value of 600mA, and a 3C current value of (3 x 600mA) 1800mA or 1.8A. The 1C current value for a 3200mAh battery would be 3200mA (3.2A).

Final Charge Voltage: The voltage at which the battery’s charge limit (capacity limit) is reached after which the charge process switches from a high current to a low maintenance rate (trickle charge). From this point on, any further high current charging would cause overheating and eventual terminal damage to the pack.

Final Discharge Voltage: The voltage at which the battery’s discharge limit it reached. The chemical composition of the batteries determines the level of this voltage. Below this voltage, the battery enters deep discharge zone. Individual cells within the pack may become reverse polarized under these conditions, resulting in permanent damage.

Nominal Voltage (V): The nominal voltage of the battery pack can be determined as follows:

- NiCd or NiMH: Multiply the total number of cells in the pack by 1.2. An 8-cell pack will have a nominal voltage of 9.6 volts (8 x 1.2).

- LiPo: Multiply the total number of cells in the pack by 3.7. A 3-cell LiPo wired in series will have a nominal voltage of 11.1 volts (3 x 3.7). 4-cell LiHV wired in a series will have a nominal voltage of 14.8 volts. (4 x 3.7).
Commonly Used Terms [cont.]

- **Lilon**: Multiply the total number of cells in the pack by 3.6. A 2-cell Lilon wired in a series will have a nominal voltage of 7.2 volts (2 x 3.6).

- **LiFe**: Multiply the total number of cells in the pack by 3.3. A 4-cell LiFe wired in a series will have a nominal voltage of 13.2 volts. (4 x 3.3).

- **LiHV**: Multiply the total number of cells in the pack by 3.8. A 4-cell LiHV wired in a series will have a nominal voltage of 15.2 volts. (4 x 3.8).

If the nominal voltage of the battery is not printed on the battery’s label, consult your battery manufacturer or supplier. Do not attempt to guess the rated voltage of the battery.

Conformity Declarations

For EC directives: The product has been tested to meet the following technical standards:

<table>
<thead>
<tr>
<th>Test Standards</th>

Disposal and Prop 65 Warning

This symbol indicates that when this type of electronic device reaches the end of its service life, it cannot be disposed of with normal household waste and must be recycled. To find a recycling center near you, refer to the internet or your local phone directory for electronic waste recycling centers.

STATE OF CALIFORNIA PROPOSITION 65 WARNING:

This product contains chemicals known to the State of California to cause cancer. Use caution when handling this product and avoid exposure to any electronic components or internal assemblies.

Warranty and Service

LIABILITY EXCLUSION:

This charger is designed and Approved exclusively for use with the types of batteries stated in this Instruction Manual. Hitec RCD, USA accepts no liability of any kind if the charger is used for any purpose other than that stated. We are unable to ensure that you follow the instructions supplied with the charger, and we have no control over the methods you employ for using, operating and maintaining the device. For this reason we are obliged to deny all liability for loss, damage or costs which are incurred due to any misuse or operation of our products. Unless otherwise prescribed by law, our obligation to pay compensation, regardless of the legal argument employed, is limited to the invoice value of Hitec RCD, USA products which were immediately and directly involved in the event in which the damage occurred.

ONE YEAR LIMITED WARRANTY:

For a period of one year from the date of purchase HITEC RCD USA, INC. shall REPAIR OR REPLACE, at our option, defective equipment covered by this warranty, otherwise the purchaser and/or consumer is responsible for any charges for the repair or replacement of the charger. This warranty does not cover cosmetic damages and damages due to acts of God, accident, misuse, abuse, negligence, improper installation, or damages caused by alterations by unauthorized persons or entities. This warranty only Applies to the original purchaser of this product and for products purchased and used in the United States of America, Canada and Mexico. Plastic cases are not covered by this warranty.
THIS WARRANTY IS IN LIEU OF ANY AND ALL OTHER WARRANTIES, WHETHER FOR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND WHETHER EXPRESS OR IMPLIED. REPAIR OR REPLACEMENT AS PROVIDED UNDER THIS WARRANTY IS THE EXCLUSIVE REMEDY. HITEC RCD, INC. SHALL NOT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES FOR BREACH OF ANY EXPRESS OR IMPLIED WARRANTY RELATING TO THIS PRODUCT. EXCEPT TO THE EXTENT PROHIBITED BY APPLICABLE LAW, ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE ON THIS PRODUCT IS LIMITED IN DURATION TO THE DURATION OF THIS WARRANTY, REPAIR AND SERVICE.

To have your Hitec charger serviced:

1. Visit the Hitec website at www.hitecrccd.com and download the service request form (under Support section).

2. Fill out the service request form completely and include a copy of your original receipt showing the purchase date.

3. Package your product in its original packaging or use a suspension-type packaging (foam peanuts or crumpled newspaper). Hitec RCD shall not be responsible for goods damaged in transit.

4. Ship prepaid (COD or postage-due returns will not be accepted) via a traceable common courier (UPS, insured parcel post, FedEx, etc.) to:

   Hitec RCD USA, Inc., Customer Service Center, 12115 Paine St., Poway CA 92064
